ICT INTEGRATION IN TEACHING AND LEARNING

ICT in education can let us achieve the next standard of living based on competences. This will happen if and only if all among these, are solved.

Challenges on the application of ICT in teaching and learning

- Incompetent implementers(teachers).

- Shortage of ICT equipment like computers, smartphones, projectors among others.
- Inadequate infrastructure electricity and its installations that are available in most of schools.

Ways of overcoming the challenges mentioned

1. Providing needed infrastructure for all schools to easily applicate ICT in education.

2. Human resources development to fit the ICT in use.

3. Distributing the electronic devices for all competent teachers in ICT.
